

BIO-REGULATOR

S

What are Bio-Regulators?

Peptide Bio-Regulators are a specific class of peptides that differ from traditional peptides in their function and application. They are typically composed of short sequences of amino acids, usually ranging from 2 to 7 residues long. Unlike traditional peptides, which may stimulate existing biological pathways, peptide bio-regulators actively interact with DNA to influence gene expression and cellular functions.

Peptide bio-regulators work by binding to specific receptors on cell membranes, initiating a cascade of bio-chemical events that enhance cellular function and regeneration. They can directly influence gene expression, leading to improved protein synthesis and cellular repair mechanisms. This unique ability allows them to reset genetic expression patterns that may be altered due to aging or disease.

Benefits of Bio-Regulators

- **Promote Tissue Repair-** By enhancing cellular regeneration and supporting the body's natural healing processes.
- **Regulate Physiological Functions-** Such as immune response, metabolism, and hormonal balance.
- **Support Overall Wellbeing-** They can help alleviate symptoms of various conditions and improve quality of life with minimal side effects.

Bio-Regulators Currently Available

- Adrenal Gland Support
- Bone Marrow Support
- Central Nervous System Support
- Kidney Support
- Liver Support
- Pancreas Support
- Prostate Support
- Retina Support
- Testes Support

*Bio-Regulators starting at \$100.00 for 20 capsules.
Prices subject to change. *
