

CJC-1295/IPA BLEND

The blend of CJC-1295, A Growth Hormone-Releasing Hormone (GHRH) analog, and Ipamorelin, a selective Growth Hormone Secretagogue (GHS), is a potent combination that maximizes growth hormone release through dual mechanisms. CJC-1295 works by increasing the amplitude of GH pulses from the pituitary, while Ipamorelin enhances the frequency of these pulses without significantly affecting other hormones. Together, they provide synergistic effects, promoting muscle growth, fat loss, and improved recovery without the adverse effects of direct growth hormone administration.

Muscle Growth and Recovery-

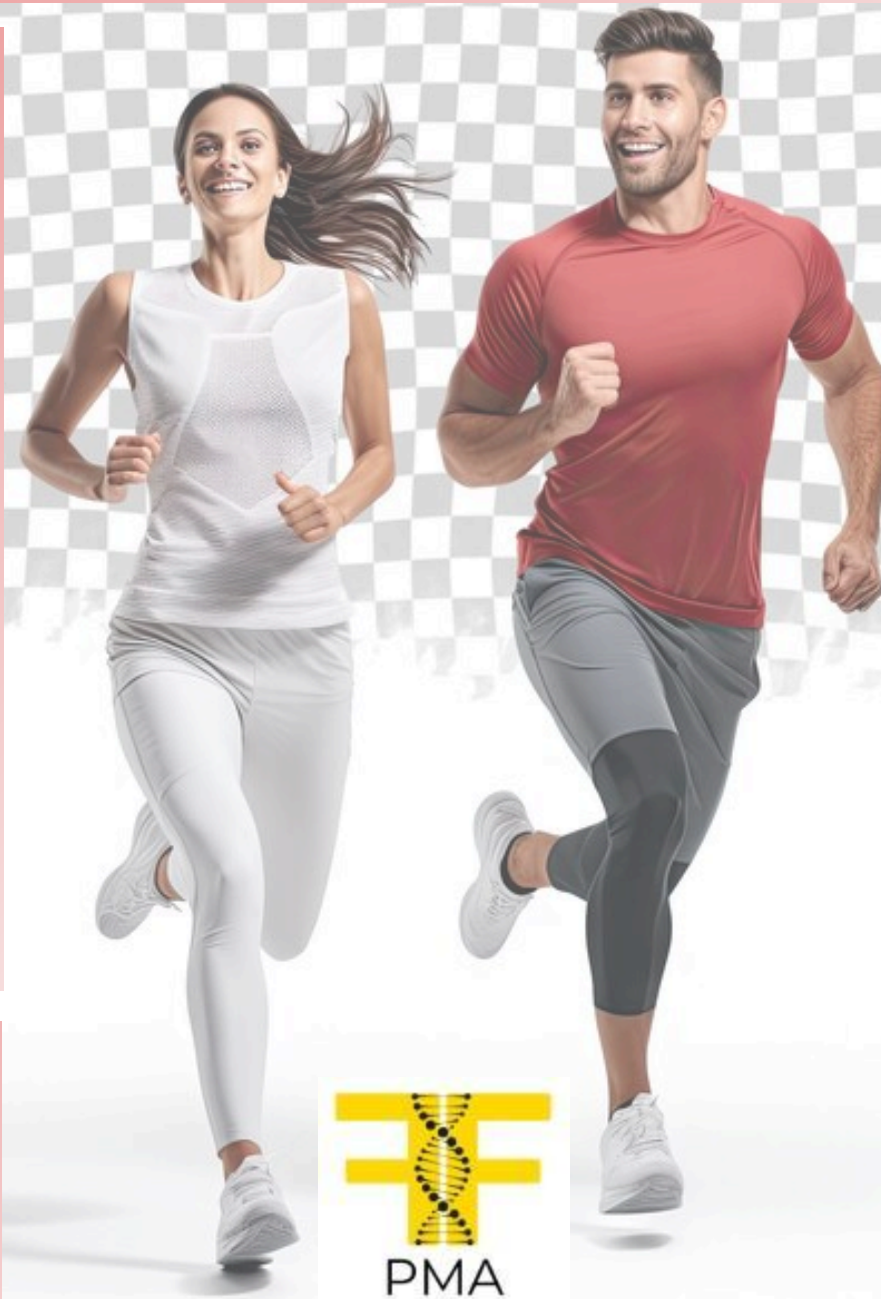

Increases muscle protein synthesis, enhances muscle recovery, promotes muscle hypertrophy, and reduces muscle breakdown after physical exertion.

Fat Loss and Improved Body Composition-

Supports fat metabolism, increases lean muscle mass, reduces visceral and subcutaneous fat, and enhances metabolic function.

Increased Recovery and Tissue Repair:

Speeds up wound healing reduces recover from surgeries or injuries and supports joint and connective tissue health.

Anti-Aging and Longevity:

Improves skin elasticity, reduces wrinkles, enhances sleep quality, increases energy levels, and supports cognitive health.

Enhanced Sleep and Cognitive Function:

Promotes deeper, more restorative sleep, enhances cognitive clarity, memory, and overall mental performance.
