

# EPITHALON

## “FOUNTAIN OF YOUTH”

### WHAT IS EPITHALON??

Epithalon is a bio-identical peptide of epithalamin, a naturally occurring peptide produced by the pineal gland. It is primarily known for its potential in anti-aging therapies and promoting longevity by activating telomerase, an enzyme that protects DNA during cell division. Epithalon has also been explored for its role in improving sleep quality and supporting immune function.

### BENEFITS OF EPITHALON

- Increases lifespan, improves cellular function, and enhances overall health by reducing age-related cellular damage.
- Enhances sleep quality, especially in individuals with insomnia or disrupted sleep cycles.
- Boosts the body's defense against infections, improving overall immune response.
- Enhances tissue regeneration, supports healthy aging, and reduces the risk of degenerative diseases.
- Lowers the accumulation of free radicals and reduces oxidative damage to tissues.
