

MELANOTAN 2

**ENHANCE THE BENEFITS OF THE SUN, WHILE
ALSO PROTECTING AGAINST SKIN CANCER!!!!**

Melanotan II (MT-II) is a Bio-Identical peptide that mimics the action of the naturally occurring melanocortin peptide hormone. It is primarily used to stimulate the production of melanin, the pigment responsible for tanning in the skin, and has gained popularity for its ability to enhance tanning without excessive sun exposure. Additionally, Melanotan II has effects on sexual function and appetite regulation due to its interaction with melanocortin receptors.

HISTORY OF MELANOTAN II

Melanotan II was developed at the University of Arizona in the 1980's, initially researched as a potential treatment for skin cancer by reducing the risk of UV damage through increased melanin production. Over time, its ability to induce a natural tan and potential aphrodisiac effects became more widely recognized, leading to its use in cosmetic tanning and sexual health research.

BENEFITS OF MELANOTAN 2

- ☀ Provides a natural looking tan while reducing the need for harmful UV exposure and the risk of skin damage or skin cancer!
- ☀ Increases Libido in men and women and can improve erectile function.
- ☀ Acts as an appetite suppressant, potentially helping in weight management by reducing hunger.
- ☀ Promotes skin health by tightening and toning the skin. Also helps heal hair follicles and skin pores.
- ☀ Improves sense of well-being!
