

PT-141

PT-141, also known as Bremelanotide, is a bio-identical peptide that influences sexual arousal and desire. It functions through the central nervous system rather than directly on the reproductive organs, making it unique among treatments for sexual dysfunction. It is primarily used to address sexual desire issues and enhance arousal in both men and women.

Benefits of PT-141

- **Female Sexual Dysfunction:** Increased sexual arousal and improved sexual satisfaction.
- **Male Erectile Dysfunction:** Improved erectile function and sexual arousal.
- **Sexual Desire Enhancement:** Enhanced sexual desire and improved sexual experiences.
- **Testosterone-Resistant Sexual Dysfunction:** Improved sexual function and arousal.
- **Experimental Treatment for Sexual Disorders:** Offers new options for individuals with different sexual health issues.
