

# TESAMORELIN/IPA BLEND

A blend of Tesamorelin and Ipamorelin combines the benefits of two potent peptides that stimulate growth hormone release through different mechanisms. Tesamorelin, a growth hormone-releasing hormone analog, directly stimulates the pituitary gland to increase GH secretion, primarily targeting visceral fat reduction. Ipamorelin, a selective growth hormone secretagogue, mimics ghrelin and binds to GH secretagogue receptors, promoting the release of growth hormone without significantly affecting other hormones like cortisol or prolactin. Together this blend can maximize the anabolic, fat loss, and anti-aging effects of growth hormone therapy.

## **Benefits:**

- \*Reduces abdominal fat, improves muscle-to-fat ratio, and enhances overall physical appearance and metabolic health.
- \*Enhances Skin Quality, reduces wrinkles, improves sleep patterns, boosts energy, and supports cognitive health, contributing to a more youthful appearance and better quality of life.
- \*Stimulates muscle protein synthesis, promotes muscle hypertrophy, reduces recovery time between workouts, and increases overall physical performance.
- \*Accelerates healing of wounds, injuries, supports bone health and joint function; and reduces inflammation.
- \*Enhances cognitive clarity, memory retention and overall mental acuity, making it beneficial for individuals experiencing age-related cognitive decline.
