

# SERMORELIN

Sermorelin is a Bio-Identical version of the first 29 amino acids of the naturally occurring GHRH (growth hormone-releasing hormone).

Sermorelin helps with healthy body composition, it enhances skin elasticity, improves sleep quality, and bolsters overall energy levels.

Sermorelin assists in anti-aging, cognitive function, and memory retention.

Many athletes and bodybuilders use Sermorelin for its anabolic properties, which helps to increase muscle mass and enhance physical properties.

Sermorelin reduces visceral and subcutaneous fat, improves metabolism, and helps regulate blood sugar levels, making it beneficial for those with metabolic disorders.
